

## New DSX Version 2 Field Trial Software !

DSX System Software 2.01 is an important new Field Trial release that provides many productivity enhancements to the already robust DSX feature set. Read on to find out what's been added.

---

### Email Integration

***Receive an email notification when a new message is left in your mailbox.***

Sends an email notification when a keyset user receives a new message in their mailbox. It can optionally include the recorded message as a wav file attachment. You must upgrade to IntraMail Pro 4 Port x 16 Hour (P/N 1091051) or IntraMail Pro 8 Port x 32 Hour (P/N 1091053) in order to use Email Integration.

---

### Office Administrator PC Program

***An office supervisor can quickly customize basic system features from their PC.***

This includes the Time and Date options, important extension feature and voice mail options, and Speed Dial numbers. The Office Administrator also lets the supervisor customize Ring Groups and UCD Groups.

---

### Built-In Modem

***Remotely program a system using the DSX built-in modem.***

Use the System Administrator and the modem in your PC to remotely program a system. The DSX built-in modem is software-based and no additional equipment at the remote site is required.

---

### Park and Page

***When an outside call can't go through, Park and Page automatically parks the call and pages the extension user.***

The called extension user can then go to any telephone and use Personal Park to pick up the call. With Park and Page, IntraMail tries to locate the person instead of just sending the call to their mailbox.

---

### Distribution Lists

***Send a message to a single Distribution Mailbox and have IntraMail automatically distribute it to multiple co-workers.***

Any message left in the Distribution Mailbox will be automatically sent to all the mailboxes in the list. Instead of recording the message and manually specifying a list of recipients, use a Distribution List instead.

## Room Monitor

### ***Monitor the sounds at another extension.***

A great residential application, Room Monitor lets you monitor the sounds at another extension. For example, use Room Monitor to listen for sounds in an infant's room.

## Broadcast Message

### ***A unique message that is automatically sent as a new message to all subscribers.***

Once recorded by the System Administrator, a Broadcast Message is automatically distributed to all active Subscriber Mailboxes. Use a Broadcast Message for important company announcements.

## Mailbox Announcement Message

### ***A user hears the Mailbox Announcement Message each time they access their mailbox.***

This message, recorded by the System Administrator, plays to each subscriber when they log onto their mailbox. The message will play at each log on until it expires, is deleted, or made inactive by the System Administrator.

## Super Display Light Sensitivity Adjustment

### ***The Super Display Telephone can automatically adjust its display to the room lighting.***

The backlighting automatically adjusts to the room brightness. In a brightly lit room, the display will stay at its maximum backlit level. If the room light dims or goes out, the telephone's display will automatically change to the minimum backlit level.

## Networking Enhancements

### ***Internet Time Service***

Allows the DSX to use a server on the internet as its time source.

### ***DHCP Support***

To streamline network setup, set up the DSX system to be a Dynamic Host Configuration Protocol (DHCP) client. The site's DHCP server can automatically provide an IP address and other important network settings.

## Additional Audio Inputs and Outputs

### ***Additional system audio inputs and outputs are now available.***

- *Background Music* is available from one of six sources: the two audio input minijacks and one of four PGDAD Module audio ports.

- *Music on Hold* is available from one of eight sources: two internal beep tones, two audio input minijacks, and one of four PGDAD Module audio ports.

- *External Paging* is available through the audio output minijack and any available PGDAD Module audio port set up for External Paging.

**Enhanced Prime  
Line with Privacy  
Release Group**

***Enhanced for residential applications to automatically join a call in progress.***

Tailored for residential applications, Prime Line and Privacy Release Groups allow you to automatically join a call in progress when you lift the handset.

**More Routing  
Mailboxes**

***More Routing Mailboxes for more flexibility.***

IntraMail now provides 32 Routing Mailboxes (increased from 16) which you can allocate as Call Routing, Announcement, Directory Dialing, or Distribution Mailboxes.

**Message  
Notification Setup  
from the System  
Administrator**

***Conveniently set up Message Notification options from the System Administrator.***
